Evaluation Item	Excellent development (2 points each item)	Average Achievement (1 point each item)	Poor Achievement (0 point each point)
Abstract	The abstract is clear, concise, and highlights the most important aspects of the article. It contains follows elements: objective, research design, methodology, study sample, data collection instrument, main result, and conclusions.	The abstract isn´t clear and contains only some elements: objective, research design, methodology, main result, and conclusions.	The abstract lacks a clear structure and does not present important elements such as the objective, method used, results, and conclusions.
Introduction	The introduction clearly and concisely presents the topic of study, briefly explains the problem with a reliable source, and highlights its relevance. It justifies the topic by pointing out its importance and its contribution to a Sustainable Development Goal (SDG), for example, by clearly presenting the objective. Include up-to-date and relevant bibliography.	The introduction presents some of these aspects without much clarity: the topic of study, the problem with a reliable source and its relevance, the justification, and relevant bibliography.	The introduction lacks a clear structure and does not adequately present the topic, relevance, and objectives of the article. The bibliography is limited or irrelevant.
Theoretical framework	The theoretical framework is comprehensive and solidly presents the theoretical foundations of the topic of study and its relationship to the variables and dimensions analyzed. In this section, it cites at least 30 indexed scientific papers.	The theoretical framework is incomplete or does not solidly present the theoretical foundations of the topic of study and its relationship to the variables and dimensions analyzed. It could be comprehensive and solid, but it cites between 15 and 29 scientific papers.	The theoretical framework is insufficient or does not present a clear relationship between the theory and the variables analyzed or cites fewer than 14 scientific papers.
Results	The paper presents results clearly and it uses an appropriate statistical analysis and interpretation, which in turn is linked to the research objective or problem studied.	The paper don´t presents clearly, it doesn´t accompanied by statistical analysis and interpretation or which is moderately linked to the research objective.	The results lack clarity and haven´t adequate statistical analysis.
Methodology	The manuscript describes the methodology clearly. It provides details	The manuscript describes the methodology clearly but does not	The methodology is not clearly described nor does it explain the

	such as research design, study sample and its method of selection, instruments and methods of analysis, using ethically correct processes.	explain the instruments used. It presents some inconsistencies or incoherencies between its parts, or it does not incorporate ethical validations.	research design used. It contains inconsistencies and is not coherent between its parts.
Conclusions	The conclusions are clear and are derived from the objectives, the results, and the discussion. For each dimension, both the contributions and limitations of the study are presented appropriately.	The conclusions are clear and derived from the objective, the results, and the discussion. The contributions or limitations of the study are not clearly presented.	The conclusions are confusing or unrelated to the results and discussion. The contributions and limitations of the study are not presented clearly.
APA Citations	The manuscript uses APA 7 format in the references and cites. Sources are cited properly and plagiarism is avoided by checking for a 10% similarity in Turnitin.	Some citations are not in APA format. Some citations are incorrect or show a similarity between 11% and 19% according to Turnitin.	Sources are not cited properly; plagiarism is detected; or Turnitin indicates more than 20% similarity.
Indicated extensions	The abstract is between 150 and 250 words. The conclusions are between 175 and 300 words.	The abstract isn´t between 150 and 250 words, or the conclusions aren´t between 175 and 300 words.	The abstract isn´t between 150 and 250 words and the conclusions aren´t between 175 and 300 words.
Writing and coherence in the third person	The manuscript is written clearly, coherently, and without significant grammatical errors. The third person is used consistently.	The article contains some grammatical errors or does not use the third person consistently.	The article's writing is confusing or contains numerous grammatical errors. The third person is not used consistently.
Template use	The manuscript use the template and respect the formats.	The manuscript use the template but does not respect some formats.	The manuscript does not use the template or does not respect the formats.

Decision guide

- 20 points, **Accept without modifications**
- Between 14 points and 19 points, **Accept with minor modifications**
- Between 13 points and 8 points, **Accept with major modifications**
- Less than 7 points, **Decline Submission**
